

Client/CS Team Meeting - 1/15/2020

- Emailed Nash with update email last night (1/14/2020) with progress on the work that we did on the project
- Idea to build a frame to build around the ROV to make the system more rigid
- Spend some time designing and thinking about weight balance, try to drive the ROV around to experiment and get an idea of what we are actually working with.
- Big challenge is going to be the attachment system to the ice, but trying to find a way to balance the system will also be difficult and is something that needs to be considered
- Filled out application to rent Dixon Dive Pool for ROV testing
- Call up the company about the heating element for melting into the ice for the ROV
