

Meeting with Jonathan, Isaac, and Koulby - 11/25/19

- BlueROV has been ordered and is on the way
- Nash wants to know where we want to work on the ROV? Proposed being able to use his labspace on Western which is his natural workspace
- 3 things Nash didn't get; underwater GPS, USB HD Camera, or the echo sounder because it was backordered and didn't want to delay the shipping anymore
- Isaac talked with the company selling the laser systems with Meagan, starting cost is around \$35k
- Nash wants more design specifications from the company about the laser system
- Apparently they have test models, Isaac is going to try and rent one for a week and do some testing with it
